PREMIUM HYBRID SERIES CASEMENT CONSTRUCTION

1. Aluminum extruded exterior
2. Dual pane thermo
3. Low-e coating
4. Integrated 4 1/2" or 5 1/2" frame depth
5. Integrated 1/2" & 3/4" wood / drywall return
6. Maintenance Free PVC interior frame
7. Warm edge Intercept® ULTRA stainless

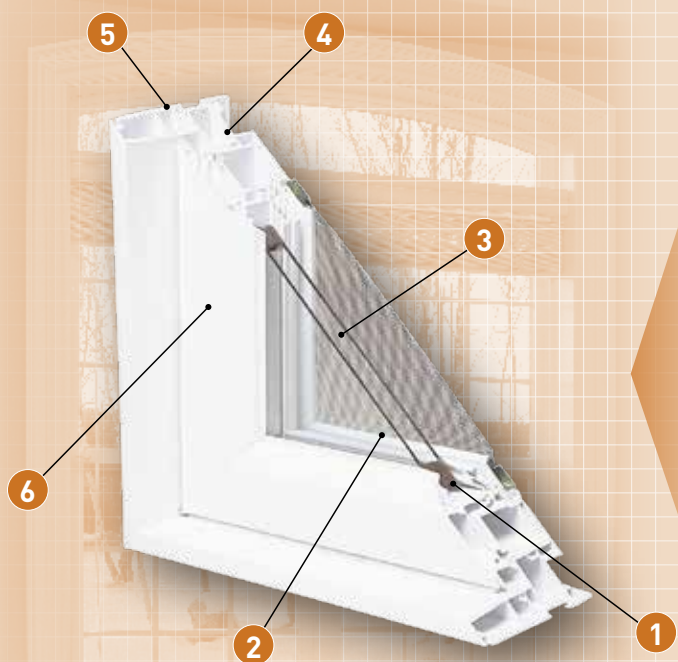

PREMIUM BENEFITS

CHARACTERISTICS/BENEFIT

1. Window combining the thermal performance of the PVC on the inside with the structural strength, the aesthetics of lines and colours and the durability of enamelled extruded aluminum on the outside.
2. Multiple chamber profiles for optimum thermal insulation.
3. Triple weatherstrips located on the sash for maximum air and water tightness.
4. The frames are designed to put the glass in the warm part of the wall. Furthermore, it's 90° geometry allows for better water evacuation on top of being easy to clean.
5. Water evacuation without any apparent holes or caps.
6. The 3/4" and 1/2" returns are built into the frame for a cleaner finish.
7. Available in a complete family of products (casements, awnings, horizontal sliders, vertical sliders, picture frames and entrance doors) that all have a similar exterior look.

PRO CASEMENT CONSTRUCTION

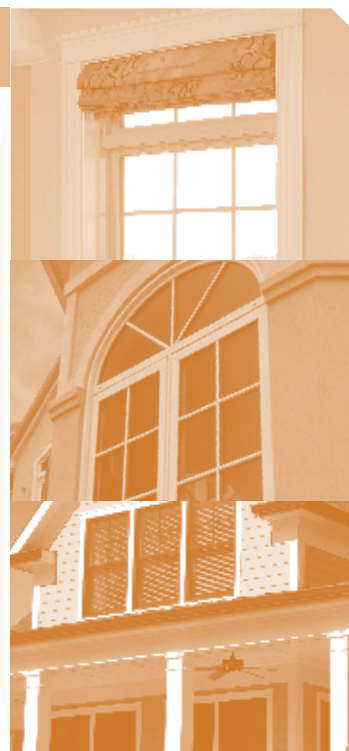

1. Warm edge Intercept® ULTRA Stainless
2. Dual pane thermo
3. Low-e coating
4. Integrated 3/4" wood return
5. Integrated 4 1/2" or 5 1/2" frame depth
6. Sash with flat edge

PRO BENEFITS

CHARACTERISTICS/BENEFIT

1. 1- All PVC window with thermally welded corners for better performance and efficiency.
2. Multiple chamber profiles for optimum thermal insulation.
3. Triple weatherstrips located on the sash for maximum air and water tightness.
4. The frames are available with or without integrated brick mould, easy to clean.
5. The 3/4" and 1/2" returns are built into the frame for a cleaner finish.
6. Water evacuation without any apparent holes or caps.
7. Central interlocking system that increases performance with Air Infiltration and Forced Entry test results.
8. Available in a complete family of products (casements, awnings, horizontal sliders, vertical sliders, picture frames and entrance doors) that all have a similar exterior look.

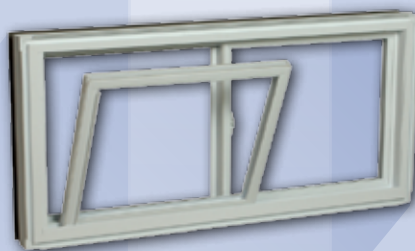

PREMIUM COLLECTION

- Fixed or Operating Sash depending on Shape
- Limited Only by Your Imagination

DID YOU KNOW?

- Bay and Bow (combination) windows are typically made from a fixed picture window in the middle, with a Casement window on each side.

- Choose window sizes and locations that will allow you to get the greatest amount of natural light. Southern exposures typically bring in more sunlight.

ENTRANCE COLLECTION

STEEL DOORS

FIBERGLASS DOORS

Your home is your castle. It's also your cathedral and your magnificent monument. It's home, sweet home. That's why choosing the right door is one of the most important decisions you, as a homeowner, will make. Because your entrance is your home's first impression, and the welcome your home offers.

Procanna, believes that choosing the ideal door is about more than appearance. It's about choosing a product that will give you and your family security and peace of mind. It's about finding a door that will increase energy efficiency and resale value, while decreasing maintenance costs.

DECORATIVE DOOR & SIDE LITES

TRANSOMS & SIDE LITES

STANDARD FEATURES

Energy Star Approved • CSA Approved • Industry Leading Warranty

35 paint colour options available

STEEL DOORS

Steel doors remain our most popular line due to their solid construction which allows them to resist cracking and years of exposure to the elements, while requiring very little maintenance. They are an ideal choice for homeowners requiring a high degree of security from their entrance doors.

- 4 5/8" Finger Jointed Pine Jamb
- Prefinish White Door Slab
- Thermally Broken Aluminum Sill
- Magnetic & Compression Weatherstrip

EVERYTHING YOU NEED TO KNOW ABOUT ENTRANCE SYSTEMS

GLASS

Achieve the look that's right for you, from basic to lavish, by selecting from our large variety of glass designs.

SHAPES

Give a more dramatic look to your entrance by adding shapes like half-round, ellipse, ellipse top, true ellipse or transom windows and sidelites.

EXTERIOR TRIMS

Find the perfect look to complement your house with brickmold options like natural wood, vinyl clad or a full range of solid vinyl brickmolds to match your windows. Available in solid white, solid sandalwood or any one of our exterior colours.

FRAME

Available in 4 5/8" up to 11 1/4" depth, natural or vinyl clad, in white or any of our exterior colours.

SLAB STYLES

The type and style of the slab chosen, will greatly alter the look of your door. Slabs are available in maintenance free pre-finished white steel; smooth white fiberglass or textured fiberglass in a variety of wood-grain textures.

SILLS

Your inswing or outswing entrance system is finished with a thermally broken sill with water deflectors.

FIBERGLASS

Textured Fiberglass

- 4 5/8" Finger Jointed Pine Jamb
- Fiberglass Textured Slab
- Thermally Broken Aluminum Sill
- Compression Weatherstrip

THE RIGHT GLASS FOR YOU

HIGH SOLAR GAIN GLASS

[One silver layer] Ideal for passive solar applications, it allows winter sun's heat to pass into the home while blocking heat loss.

The glass is coated with a microscopically thin, optically transparent layer of silver sandwiched between layers of anti-reflective metal oxide coatings. A protective coating is applied to assure durability and long life. The coating is virtually invisible to the eye – it's just like looking through clear glass.

PRODUCT	VISIBLE LIGHT TRANSMITTANCE	HEAT GAIN COEFFICIENT	WINTER U-FACTOR [AIR/ARGON]	UV	FADING TRANSMISSION
Single Pane, Clear	90%	0.86	1.04/-	0.71	0.84
Double Pane, Clear	82%	0.78	0.48/-	0.58	0.75
Ordinary low-e	76%	0.72	0.34/0.30	0.50	0.68
LoE 180	79%	0.76	0.31/0.26	0.29	0.63

SOLAR HEAT GAIN COEFFICIENT - [SHGC]

The amount of solar radiation that enters a building as heat. The lower the number, the better the glazing is at preventing solar gain.

U-FACTOR

This represents the heat flow rate through a window expressed in BTU/hr-ft²-°F, using winter night weather conditions of 0°F outside and 70°F inside. The smaller the number, the better the window system is at reducing heat loss.

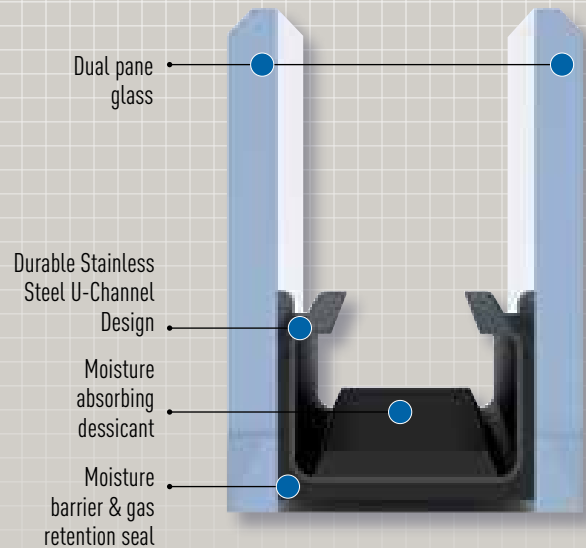

UV – ULTRAVIOLET

The lower the number, the more effective the glass is for blocking out the sun's harmful UV rays.

FADING TRANSMISSION

The portion of energy transmitted in a spectral region from 300 to 600 nanometers. This region includes all of the ultraviolet energy and part of the visible spectrum, and will give the best representation of relative fading rates. The lower the number, the better the glass is for reducing fading potential of carpets and interior furnishings.

Intercept® ULTRA Stainless

- Thermal protection at the highest level
- One of the best thermal barriers to ensure maximum performance
- The most advanced and best performing warm edge technology
- Exceptional thermal performance
- 15 year warranty

All Procanna Windows & Doors are ENERGY STAR® Approved
